

**PROJECT INFORMATION**

**Project Name:**  
**Hillcrest Pump Station and Ground Storage Improvements**

**Strategic Priority:**  
 Infrastructure / Water Transmission and Storage

**Council District(s):**  
 4, 1

**Type of Project:** Water                      **Department:** Utilities

**Project Description**

This project replaces the 5 million gallon (MG) Hillcrest Ground Storage Tank (GST) with two new 2 MG tanks and replaces the pump station (PS) and site piping. A future project will replace the existing 20-inch water line with a 24-inch line from the Riverside Water Treatment Plant (WTP) to the two new 2 MG Hillcrest GST.

**Project History**

The existing Hillcrest GST and PS are roughly 100 years old. The tank was originally sized to serve a large portion of the city. Upon completion of the Mt. Carmel WTP and associated on-site storage, the reliance on the Hillcrest GST to supply water has been reduced. The existing 5 MG tank will be replaced with two new, smaller tanks.

**Community Benefit**

This project will bring the facility up to current code and standards, provide redundancy within the water system and reduce maintenance costs. In doing so, it ensures the continuation of safe and reliable water service and improves the efficiency of water transmission to customers.

**Estimated Project Cost**

**\$10,600,000**

**Estimated Duration:**                      22 months

**Project Status:**                              pre-construction
