

**PROJECT INFORMATION**

**Project Name:**  
**Timbercrest Area Wastewater Line Replacement**

**Strategic Priority:**  
 Infrastructure - Wastewater Collection

**Council District(s):**  
 1

**Type of Project:** Wastewater    **Department:** Utilities

**Project Description**

This project consists of replacing approximately 13,000 linear feet of 6” and 8” wastewater lines. Most of these lines are located in home owner’s backyards with no alley ways. The lines will be moved to the street, providing easier access in the future.

**Project History**

The 2015 Wastewater Master Plan identified this project and the need for these wastewater lines to be rehabilitated. Multiple sewer issues in this area over the last several years have further proven the need for improvements.

**Community Benefit**

This community has had numerous problems both on the customer and city side. Moving the wastewater lines to the street will allow city staff easier access to perform future preventative maintenance and address any issues that arise. As the lines are being relocated, many customers will also receive a new service line, which should alleviate many customer-side problems, as well.

**Estimated Project Cost**

**\$2,000,000**

**Estimated Duration:** 6 months

**Project Status:** pre-bid

**Project Info Updated:** 01/13/2016
